[Github](#) | [Linkedin](#)

PROFILE

B.Tech Computer Science and Engineering student with a strong foundation in Python, SQL, and statistical data analysis. Hands-on experience turning raw datasets into actionable insights using Pandas, NumPy, and Matplotlib, with working knowledge of MySQL and SQLite for data storage and querying. Comfortable with data across financial, customer & market analysis. Seeking a Data Analyst role to apply data wrangling, visualization, and problem-solving skills to drive business decisions.

TECHNICAL SKILLS

Languages: Python, C

Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA)

Data Visualization: Matplotlib, Seaborn, Power BI

Databases & Querying: MySQL, SQLite

Core Concepts: Object-Oriented Programming, Machine Learning

Tools & Platforms: Git, GitHub, Kaggle

PROJECTS

Face Recognition Attendance System | *Python • OpenCV • NumPy • Pandas*

- Engineered a real-time face recognition attendance system in Python using OpenCV, achieving accurate face detection and recognition across live video streams
- Automated attendance logging with Pandas, generating structured spreadsheet records and reducing manual entry errors
- Processed and optimized image data with NumPy arrays to enable fast, reliable identification of registered users

Voice Assistant(Jarvis) | *Python • Pyttsx3 • OS • web browser*

- Built a Python-based voice assistant (Jarvis) that interprets voice commands and executes tasks using speech recognition and the OS module
- Integrated Pyttsx3 for real-time text-to-speech responses, giving the assistant natural, conversational voice feedback
- Enabled hands-free web browsing and application launching by mapping voice commands to browser actions and OS-level system calls

Movie Recommendation System - [Working project link](#) - | *Python • NumPy • Pandas • Scikit-learn*

- Developed a content-based movie recommendation engine in Python, leveraging Pandas and NumPy for large-scale data preprocessing
- Implemented cosine similarity and vectorization techniques with Scikit-learn to generate personalized, high-accuracy recommendations
- Applied skills in model building, model evaluation and comparison, and hyperparameter tuning.
- Analyzed movie metadata—genre, cast, and ratings—to improve recommendation relevance and user experience

CERTIFICATIONS & SOFT SKILLS

NPTEL Certifications: Leadership and Team Effectiveness; Privacy and Security in Online Social Media; and Air Pollution and Control.

Soft Skills: Analytical Thinking, Attention to Detail, Problem Solving, Communication & Team Collaboration, Team Leadership & Effectiveness
